

**IN THE SPECIFICATION:**

1 Please amend the specification at page 7, line 1-8 as follows:

2 "As shown, the billet-formed ball dome 36 is further defined by an annular face  
3 38. This face 38 will typically have a surface contour to match the contour of the outer  
4 surface of the light housing (see Figure 5) area to which the ball dome 36 attaches. The  
5 result of this form-fitted contour is to provide a clean mating surface between the ball  
6 dome 36 and the outer surface of the housing (not shown). ~~Disbursed~~ Dispersed around  
7 the annular face 38 are a plurality of threaded bores 40; these bores 40 are configured to  
8 engage bolts or screws that are threaded into the bores 40 outwardly from the inside of  
9 the light housing (see Figure 5)."
